WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut the pipe 1,500 long, ends square within 1 mm; check it is round within 8 mm (largest less smallest diameter); reject a dented pipe

Mark a line along the top; hole centres measured from the door end:

window hole 273.1 dia at 250, on the side 90 deg from the top

feed-through hole 168.3 dia at 740, same side as the window

manifold hole 60.3 dia at 1300, on the top line

Cut each hole to the nozzle's outside size plus 1 to 2 mm, square to the axis; grind smooth; bevel the outside edge for the fillet weld

Saddles, rails, tabs, ring and head are welded on (assembly steps 1 to 5)

Check: holes on the right side and line; nozzle stubs slide in

AltiRig shell: pipe offcut with nozzle holes
