WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Stub: cut 160 long from 10 in XS pipe, both ends square

Ring: 400 OD x 255 ID from 20 mm plate; drill and tap 8 x M10 on a 373 circle, 25 deep, first hole 22.5 deg off the top

Weld the ring on one stub end, face square to the stub

Set the stub into the shell's window hole so the ring face is 520 from the vessel axis and the stub ends 360 from the axis inside (it stands 16 to 40 mm proud of the inner wall)

Fillet weld the stub to the shell outside and inside, 8 mm leg

Check: ring face flat within 0.5 mm and square to the stub
