WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

- Cut two angles 900 long
- Drill three 9 dia holes in one leg, 19 from the outer edge:
50 and 450 and 850 from the door end
- Inside the shell: the drilled leg is the top, flat, pointing out to the wall; the other leg hangs down and is cut to the curve
- Top of the angle 522 above the floor, 150 out from the centre line (300 apart, faces inside), starting 80 from the shell ring face
- Scribe the hanging leg to the shell and grind to a close fit
- Fillet weld the hanging leg to the shell, 4 mm leg, both sides
- Check: both top legs level with each other within 1 mm
